

Dynamic SRS

A product pitch by Devin Chapman

What is an SRS?

An SRS (spaced repetition system) is a flashcard system for memorizing a lot of information over a long period of time

A user sees a card and decides themselves if they know it or not

If they know it, they see it again after an increasingly long period of time

If they don't know it, this chain starts over

The Problem

- Most vocabulary cards have a sentence pulled from real content (YouTube, TV, anime, etc)
- Often people read the first few words of the sentence and immediately recognize the card, instead of reading the whole sentence and understanding the word in context
- Some words have several different meanings and can be used in several different contexts
- This is bad for actual understanding

Your Solution

- Collectively people make 1000s of cards a day, and there are probably hundreds of cards for most words in a language like Japanese
- If these cards were uploaded to a server, and then pulled when the user sees the card, the user could study the same word with different example sentences from real content over a long period of time

Website Type

- Educational website
- Homepage advertising the product, locked behind a monthly subscription.
- Once the user signs up there would be 2 main sections:
 - SRS flashcard system
 - Search for all cards for a certain word

Software Development Process

What software development process will you use?

- Waterfall, Agile, or Scrum?
- Why is this the best fit for your project goals and timeline?

I would use an Agile development process because I would likely want to tweak the website based on user feedback and add new features down the road

Target Audience

Who is the site for?

- Include 2–3 fictional visitor personas
- For each visitor, include:
 - Name
 - Gender
 - Age
 - Location
 - Occupation
 - Income
 - Web Use
 - Reasons for coming to your site
- Complete this step manually using a table or with AI tools ([ChatGPT](#))

This site is for people who self-study languages and want a better SRS experience

Persona 1

- **Name:** Aiko Tanaka-Reyes
- **Gender:** Female
- **Age:** 24
- **Location:** Portland, OR
- **Occupation:** Graduate student (Linguistics)
- **Income:** \$22,000/year (stipend)
- **Web Use:** Heavy daily user — spends hours on YouTube, Discord language-learning servers, and already uses Anki daily for two other classes' flashcards
- **Reasons for coming to your site:** She's been self-studying Japanese for three years and has over 4,000 cards in her personal Anki deck. She's noticed she can "read" her own sentences from memory without actually understanding the vocab in a new context, and she's actively searching for a smarter SRS tool. She'd find your product through a language-learning subreddit or a Discord recommendation.

Persona 2

- **Name:** Marcus Whitfield
- **Gender:** Male
- **Age:** 34
- **Location:** Austin, TX
- **Occupation:** Software engineer
- **Income:** \$145,000/year
- **Web Use:** Moderate — uses apps in short bursts during commute/lunch breaks, subscribes to several SaaS tools already (fitness, productivity)
- **Reasons for coming to your site:** Learning Spanish casually for an upcoming move to Mexico City. He doesn't want to build his own Anki deck from scratch — too time-consuming — and likes the idea of a "done for you" tool that still uses proven spaced-repetition science. He has disposable income and won't blink at a \$10-15/month subscription if it saves him time. He'd find you through a targeted Instagram or YouTube ad.

Persona 3

- **Name:** Priya Nair
- **Gender:** Female
- **Age:** 17
- **Location:** Leicester, UK
- **Occupation:** High school student
- **Income:** \$0 (relies on allowance/part-time babysitting money, ~\$60/month)
- **Web Use:** Very heavy — on her phone most of the day, active on TikTok and language-learning communities there
- **Reasons for coming to your site:** Self-teaching Korean because she's into K-dramas and wants to understand dialogue without subtitles. She's tried Duolingo but feels it's too shallow, and heard about "sentence mining" from a TikTok creator. She's budget-conscious, so she'd likely start on a free tier and only convert to paid if the value is obvious — worth thinking about whether your subscription model has a freemium entry point for users like her.

Key Content & Features

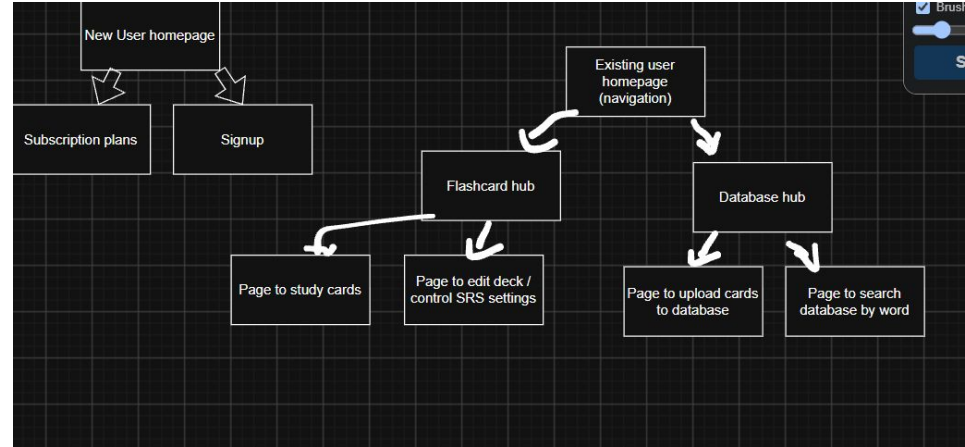

What will visitors find and do on the site?

- What pages are essential?
 - What main features should the site offer?
 - What key content and features will help users achieve their goals?
-
- Homepage explaining product and subscription plans
 - Flashcard page where users can study their cards
 - Deck management page where users can upload their own cards and edit their decks
 - Database search page where users can search by word for cards

Site Map

Insert or sketch your site map.

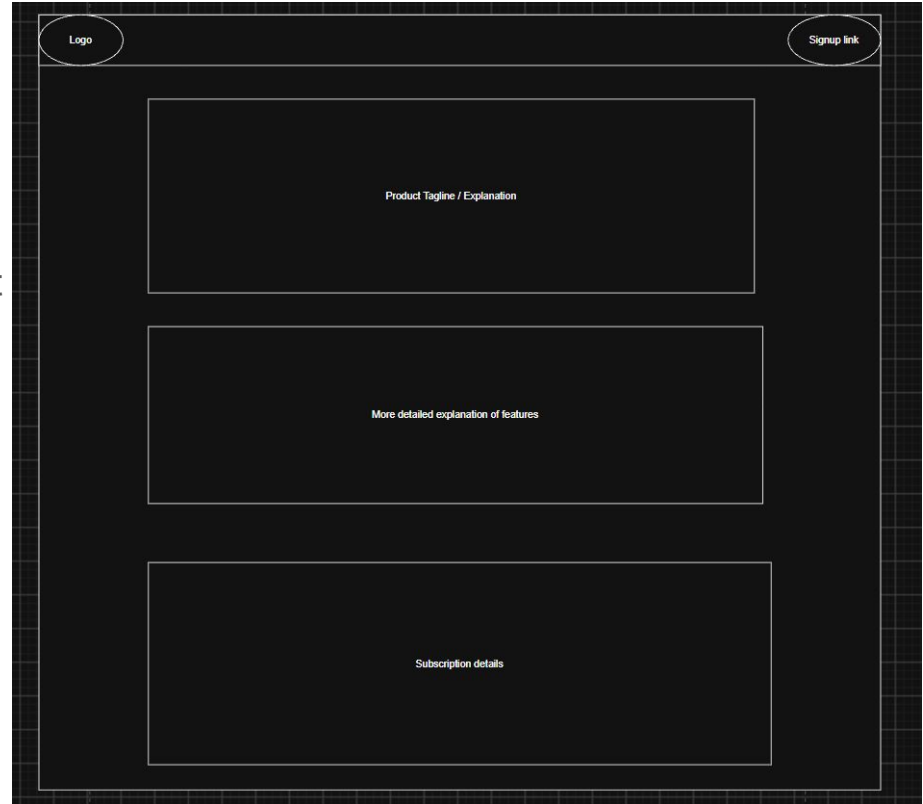

- Start with the homepage
- Show page groupings and navigation paths
- Complete this step manually on paper, using draw.io or with AI tools ([Slickplan](https://Slickplan.com), Octopus.do)

Wireframe

Insert a wireframe of your homepage.

- Show layout of header, navigation, content blocks, footer
- Focus on what goes where, not design details
- Complete this step manually on paper, using draw.io or with AI tools ([Uizard](#), [Figma with AI plugins](#))

Pitch Summary

Wrap up your pitch.

- Why is your product needed?
- What are the key benefits of your solution?
- Why is now the right time for it?

There are a lot of people who spend a lot of time studying flashcards with SRS tools, and this problem is not solvable with currently used tools like Anki

My solution would give users a way to study the same cards they already do in a way that forces them to be challenged instead of subconsciously memorizing words out of context or only in 1 context

Studying languages (especially Japanese and Korean) has been trendy for the last few years, and new startups like Migaku take advantage of this and provide useful services to users

Feedback Questions

Include any specific areas where you'd like peer or instructor feedback.

- Is the solution clear?
- Are the features too much/little?
- Is the target audience well-defined?
