A. Content & Audience

1. Did your peers clearly understand your site's purpose and target audience?

I think they mostly understood, but in their responses about the purpose of the site they did not mention the shared card pool which is the main draw to my site over similar products. But I think this is easy to gloss over for people unfamiliar with SRS systems. My target audience is people who already know or use SRS systems.

2. What suggestions did they make to improve your site's content or messaging?

They only mentioned features which were required for class assignments that I chose to not include because it did not fit with my site such as an embedded video, as well as features I plan to add in the future like a card editor.

B. Design & User Experience

3. How did your peers respond to your site's design (layout, color, typography, or organization)?

They both responded very well to my design and found it easy to navigate.

4. Did they find the design effective in communicating your message and engaging users?

They seemed to think that it was effective but I feel like the draw of the shared card pool was a bit lost on them, but this is natural for someone who does not use SRS systems and does not know the shortcomings of them.

C. Functionality & Performance

5. What issues did your peers identify with features or interactivity on your site?

The only thing they mentioned were the dead links to portions of the side I have not made yet.

6. Did they note any pages or elements that loaded slowly or inconsistently across devices or browsers?

No, they noted that my pages and elements were loading fast.

D. Accessibility & Usability

7. What feedback did you receive about accessibility (e.g., alt text, color contrast, keyboard navigation)?

I did not receive any feedback on accessibility. On Lighthouse, my site scored 100 on the accessibility metric.

8. What can you improve to make your site more inclusive and user-friendly?

I'm not sure there is any accessibility features I can improve besides fixing the confusing broken links.

E. Action Plan

9. What did your peers like most about your site?

They seemed to really like the design and styling of my website.

10. What two improvements will you make based on their feedback, and how will you implement them?

The two things I will change will be fixing the broken links when I make those pages, as well as fixing the CSS error that came from importing my font through a URL rather than importing it locally.
